Actions Reflect
Intentions.

Transparent management system:

Actions reflect Intentions:

I believe that we don't need to reinvent a wheel. But we must revisit our existing economic system in line with the latest changes in the situation on daily basis requirements and cast a critical eye on the possibility of evaluating to amending it. The current economic system has failed to coop up to the new changes/requirements and is about to collapse.

Then What and where is the solution to mankind's geopolitical economic glitches? This problem should have been resolved by our religious and secular economists. But those big heads and small brains couldn't do it because of their mental retardation? some wise said about them, They became ill due to which they went to take medicine from the same doctor's concubine.

so much so that the Muslims also look at the Western economic system for their geopolitical-economic salvation. They are so much influenced and illusioned, and they have been so deeply accustomed to the Western economic system today that even

they don't like to look at an alternative system.

Surprisingly the Muslims have been detached so much from their history and culture and apparently, this detachment could be due to a lack of belief, lack of knowledge, and fear of hunger which weaken and forced them not to try any alternate geopolitical-economic system.

Rumi said, " nature has given you feathers to fly why are you crawling on the ground". Nature does offer a solution to mankind. That logical system is "All actions reflect the Intentions". if the intentions are clear and positive the action cannot be against it. plus, Nature further guides How a common man should live?

It is the core responsibility of the Muslims since they do have this interest-free economic system of nature. they just need to introduce it to the west to understand and transform it into an act.

All over the world every each work performs under a unique system or another. Let's try to figure out how the logical system works. In my opinion, any logical system cannot be a static or a motionless object.

for example! it is quite obvious just like an ever-flowing river shall continue its motion any block in its flow will result disastrously. likewise, each person has multiple inbuilt logical systems to perform multi-tasks that can change their form with every single thought or if you look at it another way, it is also a measuring tool of the characteristics of a human being.

No project can be completed without a logical and critical analytical evaluation and application of the system. For this, first, the intended aims, and objectives have to be decided, then lay down the procedure. Maybe individuals pay little attention to it but the logical system performs miracles in the lives of nations. Every person, every society, every nation, and every country does everything through some logic-based system.

This is how a success ladder plays an important role in nation-building and consists of the following five major components:

1. **Great positive thinking.**
2. **Absolute control over available resources.**
3. **law enforcement power.**

4. knowledge and ability to do positive.
5. Purpose of the target.
(Prosperity, Happiness, and Peace).

1. **Great, positive thinking and a dream:**
There will be no success in life that can be achieved without having beautiful dreams, futuristic plans, determination, and positive thinking. it is just impossible to design and develop any kind of project without great, positive thinking and a dream. it includes a few major important components like a viable plan, finance, a competent workforce, and above all the welfare for all.

2. **Absolute control over available resources:**

Although you have all the above-mentioned major components available, you have no control over there to use them, it will not serve the purpose at all. No use in having a complete plan and material with you, if you cannot materialize and implement

the plan with full authority and responsibility. in such a dried environment even, great positive thinking will dwell only in the dream.

3. **The law enforcement power:**

Items 1&2, As above-mentioned, despite having the two major components but he does not possess the legal force or way forward to execute his plan under the state law. Thus, he absolutely would fail to achieve the target. How come in such a dried environment even great positive thinking will dwell only in the dream.

4. **knowledge and ability to do positive:**

it is imperative to Have deep logical and sequential knowledge about the plan, plus the working experience will enhance the probability of better performance. which is the fundamental prerequisite of the success of any project.

The skillful management will provide a solid foundation to deliver the project successfully.

5. Purpose of the success. (Prosperity, Happiness, and Peace).

It is assumed that if any plan is designed on necessities of life and is working on a piece of paper then rest assured it will run on the ground very smoothly. Before entering into any plan it has to be evaluated thoroughly, studied properly whether designed in line with the objectives or not. The execution plan is under the four sequential steps or not as mentioned above. otherwise, the optimum dividends of the plan cannot be achieved.
